About Seminar

In recent years, Quality Risk Management (QRM) has become regulatory requirement towards healthcare organizations. QRM is an overall and continuing process of minimizing risks to product quality throughout its life-cycle in order to optimize its benefit and balance the risk. Quality Risk Management is a systematic process for evaluation, control, communication and review of risks to the quality of the drug product across the product life cycle. Quality risk management has become an integral part of quality management system at manufacturing plants. Procedures for deviation control, change control, investigations of market complaints and batch failures are dealt with the principle of quality risk management at the manufacturing facility. The quality risk management during pharmaceutical distribution may be useful to avoid market complaints, drug recalls, and regulatory actions. It produces one unique model solution for industry professionals and policymakers opening a scope to reduce the product rejection thereby paving the way for substantial business growth. The present seminar will focus on implementation of quality risk management approach in development of pharmaceutical process and product development as per current regulatory compliance. Training for implementation of quality risk management in pharmaceutical process and product development will be given by eminent speaker from academic and industry.

About Institute:

Maliba Pharmacy College, a constituent Institute of UTU, is located in the picturesque campus on Bardoli-Mahuva road. The college is approved by All India Council for Technical Education (AICTE), the Pharmacy Council of India (PCI) and Directorate of Technical Education, Govt. of Gujarat.
