About Seminar - Scope

Pharmaceutical formulations contain both active compounds and excipients; added to aid the fabrication of the dosage form for administration to patients. It is widely accepted that the properties of the final dosage form are largely dependent on the excipients chosen and concentration in which they are used. No longer can excipients be simply regarded as inert and unimportant ingredients. A detailed knowledge not only of physical and chemical properties but also of the safety and regulatory status of these materials is essential for formulators worldwide. In addition, the growth of novel forms of delivery has resulted in an increase in the number of excipients being used. Excipient manufacturers have developed novel co processed excipient mixtures and new physical forms to improve their properties. This seminar will impart comprehensive information on related topics.

Objective

The seminar is planned with an objective of providing a platform for pharmacy professionals to get insight and interact with experts and scientists in the field of pharmaceutical excipients.
